<p>* かまの剣先を強化し、剣先の磨耗を防ぎます。ループのできにくい素材(伸縮性のあるものなど)の縫製で、かまの剣先を針に接触させて使うような場合に適しています。</p> <p>* The rotary hook point is reinforced to improve its durability. This type is suitable for sewing materials that are hard to make loops on the surface (like stretchy materials), and that requires making contact with the hook point and the needles.</p>
